# MOTOTRBO APPLICATIONS
FOR NORTH AMERICA

EDUCATION

For student transportation, MOTOTRBO applications offer enhanced safety and accountability. Fleet management applications allow you to track school vehicle data such as route adherence, schedule adherence, current location and current speed. You can also track events such as engine on/off, door open/close and lights on/off. When interfaced with an on-board RFID identity badge reader, you can even use your MOTOTRBO system to register students as they enter and leave the bus.

Giving you centralized control of your workforce, these applications offer customizable user interfaces to allow your dispatcher to coordinate your staff efficiently and effectively. They also enhance business connectivity by allowing telephony interconnections and multi-system patching.

These applications work behind the scenes of your MOTOTRBO network to enhance the efficiency and responsiveness of your system. Interfacing to a Work Order Ticketing system, managing alarms and telemetry, and connecting to other messaging systems, they bring significant benefits to your business.

Track your vehicles and your staff for improved safety, security and accountability. These applications allow you to make the most of MOTOTRBO's GPS capabilities, and some even offer indoor location tracking capabilities.

GOVERNMENT SERVICES

MOTOTRBO applications allow you to keep track of your workers, and keep them safe. Fleet management applications allow you to track vehicle data such as current location and current speed, and get alerts when a vehicle reaches a certain waypoint or goes beyond a certain range. You can also track events such as engine on/off, door open/close and siren on/off. Safety-focused applications such as Man Down and Lone Worker are also available to help safeguard your staff, and are even more effective when integrated with GPS and indoor positioning systems.

Giving you centralized control of your workforce, these applications offer customizable user interfaces to allow your dispatcher to coordinate your staff efficiently and effectively. They also enhance business connectivity by allowing telephony interconnections and multi-system patching.

These applications enhance efficiency and accountability in the workplace using text-based issue management software. They can be integrated with your existing work-order management solution or can be operated as an independent system.

Track your vehicles and your staff for improved safety, security and accountability. These applications allow you to make the most of MOTOTRBO's GPS capabilities, and some even offer indoor location tracking capabilities.

Increase the safety and accountability of your staff by deploying these applications. Features such as Man Down and Lone Worker can be linked to indoor and outdoor location services for maximum effectiveness.

To get the best from your MOTOTRBO system, you need to know how it's performing. These applications give you a dashboard view of key metrics and parameters, with detailed logs helping you plan future growth and upgrades.

HOSPITALITY AND RETAIL

MOTOTRBO applications allow you to enhance efficiency and accountability, and improve your responsiveness to guest requests. Work order ticketing applications allow you to interface your MOTOTRBO system to your existing ticketing system – whether that's HotSOS, Seqent or any of the other leading hospitality guest management systems. Your staff are empowered to create tickets without returning to their desks, and can track staff responses on the move. Job ticketing apps also allow you to seamlessly integrate the retail shop floor with the back warehouse or storeroom.

Giving you centralized control of your workforce, these applications offer customizable user interfaces to allow your dispatcher to coordinate your staff efficiently and effectively. They also enhance business connectivity by allowing telephony interconnections and multi-system patching.

These applications enhance efficiency and accountability in the workplace using text-based issue management software. They can be integrated with your existing work-order management solution or can be operated as an independent system.

MANUFACTURING

MOTOTRBO applications offer improved safety, accountability and productivity in a manufacturing environment. Work Ticket Management applications allow you to connect directly to your machines, automatically dispatching the right technician in response to failures. Technicians can also use their radios to send commands to equipment directly: opening gates, turning on lights and starting machines. Job ticketing gives you productivity and accountability improvements: using text-based dispatch reduces errors and allows timely escalation.

Giving you centralized control of your workforce, these applications offer customizable user interfaces to allow your dispatcher to coordinate your staff efficiently and effectively. They also enhance business connectivity by allowing telephony interconnections and multi-system patching.

These applications enhance efficiency and accountability in the workplace using text-based issue management software. They can be integrated with your existing work-order management solution or can be operated as an independent system.

Increase the safety and accountability of your staff by deploying these applications. Features such as Man Down and Lone Worker can be linked to indoor and outdoor location services for maximum effectiveness.

To get the best from your MOTOTRBO system, you need to know how it's performing. These applications give you a dashboard view of key metrics and parameters, with detailed logs helping you plan future growth and upgrades.

TRANSPORTATION AND LOGISTICS
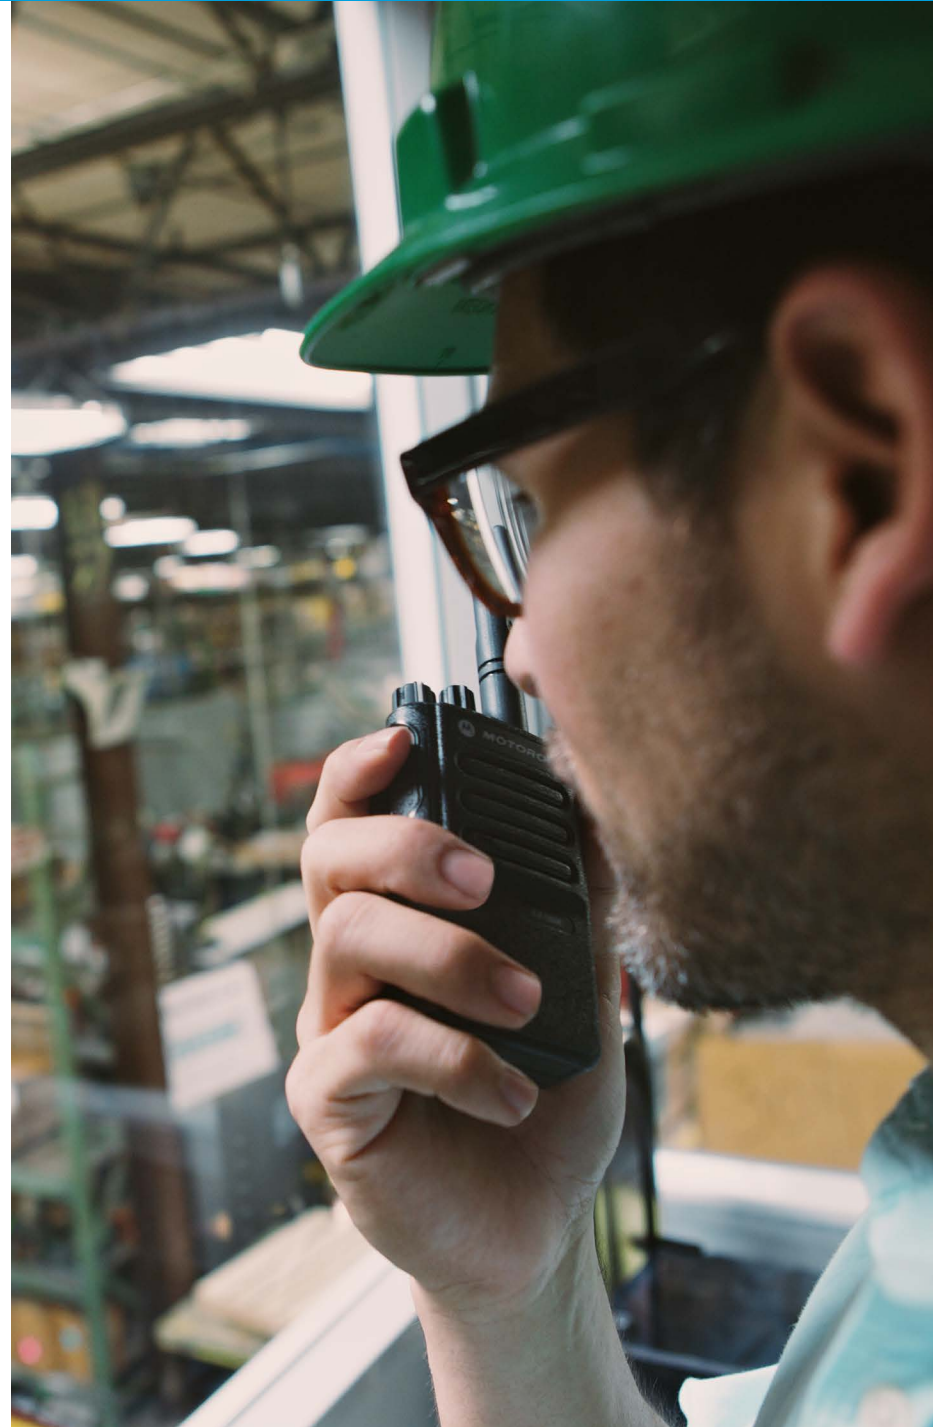

MOTOTRBO applications offer improved productivity for transportation businesses. Fleet management applications allow you to track vehicle data such as current location and current speed. For transit applications, you can also track route and schedule adherence, and get alerts when a vehicle reaches a certain waypoint. You can also track events such as engine on/off, door open/close and lights on/off, and log drivers on and off shift. This can help you guard against unauthorized deliveries. You can also connect your delivery tracking system over MOTOTRBO, using radio-attached barcode or RFID scanners.

Giving you centralized control of your workforce, these applications offer customizable user interfaces to allow your dispatcher to coordinate your staff efficiently and effectively. They also enhance business connectivity by allowing telephony interconnections and multi-system patching.

These applications work behind the scenes of your MOTOTRBO network to enhance the efficiency and responsiveness of your system. Interfacing to a Work Order Ticketing system, managing alarms and telemetry, and connecting to other messaging systems, they bring significant benefits to your business.

Track your vehicles and your staff for improved safety, security and accountability. These applications allow you to make the most of MOTOTRBO's GPS capabilities, and some even offer indoor location tracking capabilities.

UTILITIES AND ENERGY

MOTOTRBO applications enhance efficiency and accountability for your workers. Fleet management applications allow you to track vehicle data such as current location and current speed, and get alerts when a vehicle reaches a certain waypoint. You can also track events such as engine on/off, door open/close, lights on/off and bucket lift up/down. Work order ticketing applications allow you to dispatch your workers more efficiently. Text-based work tickets reduce errors, and can be used to improve accountability. Personnel safety applications watch over your workers, with products such as Man Down and Lone Worker.

Giving you centralized control of your workforce, these applications offer customizable user interfaces to allow your dispatcher to coordinate your staff efficiently and effectively. They also enhance business connectivity by allowing telephony interconnections and multi-system patching.

These applications enhance efficiency and accountability in the workplace using text-based issue management software. They can be integrated with your existing work-order management solution or can be operated as an independent system.

Track your vehicles and your staff for improved safety, security and accountability. These applications allow you to make the most of MOTOTRBO's GPS capabilities, and some even offer indoor location tracking capabilities.
